

SKIIN Switzerland Website Copy Update Specification

Version 3.0 – 22 July 2025

Executive Summary

This document outlines comprehensive updates to SKIIN Switzerland's website copy. The goal is to refine messaging based on stakeholder feedback and newly gathered evidence, strengthen emotional appeal, emphasise preventive health and longevity, and tailor value propositions for multiple audiences. All content respects Swiss cultural sensibilities and aligns with the established design system. Statistics and medical claims have been validated through research (see **RESEARCH.md**).

1 Global Changes

1.1 Product Naming

- **Holter Monitoring → 10-Day Heart Screening**
- **TriTest → SKIIN 3X Screening™** (monitors heart rhythm, blood-pressure trends and sleep breathing)
- Self-pay options: **3-Day Screening**, **5-Day Screening** and **10-Day Screening** (gold standard). Pricing appears in the dedicated pricing section.

1.2 Core Themes

Maintain existing themes—Swiss precision & quality, medical credibility, insurance coverage, comfort & wearability, clinical accuracy—and integrate the following:

1. **Longevity & Quality of Life.** Encourage visitors to “add years to their life and life to their years” through proactive heart screening.
2. **Preventive Health.** Emphasise that **up to 70 % of atrial-fibrillation episodes may be symptom-free**, so early detection is critical ¹.
3. **Arrhythmia–Stroke Connection.** Note that atrial fibrillation contributes to **20–30 % of ischemic strokes** ²; early intervention helps prevent strokes.
4. **Emotional Storytelling.** Highlight the human impact: every detection means another birthday celebrated, mountain climbed, or life uninterrupted.
5. **Caregiver & Family Messaging.** Address loved ones encouraging screening for the people they care about.

1.3 Language Support

Extend multilingual support to **Italian** in addition to German, French and English. Whenever language options are mentioned, list all four languages.

2 Homepage

2.1 Hero Section

Headline (choose the strongest based on A/B testing):

- *"Heart Disease Is the #1 Killer — When Was Your Last Heart Check?"*
- *"Live Longer. Screen Smarter. From Home."*
- *"Your Heart. Your Future. Your Control."*

Subheadline:

"Up to 70 % of atrial-fibrillation episodes have no symptoms. Join thousands of Swiss families taking control of their heart health — because every heartbeat matters to someone."

Prominent CTAs:

Primary Button: Start Your Free Assessment
Secondary Button: Check Insurance Coverage
Text Link: Questions? Read our FAQ →

Place this CTA block high on the page and repeat at relevant intervals throughout the homepage.

2.2 Problem/Solution Framework

Problem Section

1. **Heart Disease Is the #1 Killer.**
2. Heart rhythm disorders and atrial fibrillation often remain undetected.
3. Up to 70 % of AF episodes may be silent ¹.
4. AF contributes to 20–30 % of ischemic strokes ².
5. When symptoms appear, it may already be too late.
6. **Traditional Screening Is Broken.**
7. Hospital visits and referrals discourage preventive care.
8. Bulky Holter monitors with wires and adhesive patches are uncomfortable.
9. One-off tests can miss intermittent arrhythmias.
10. Waiting rooms waste precious time.

11. Who Should Get Screened?

12. People with chest pain, palpitations or dizziness.
13. Anyone with a family history of heart disease or stroke.
14. Those with a prior diagnosis requiring monitoring.
15. Proactive individuals without symptoms — prevention is key.

Solution Section

1. Early Detection Made Simple.

2. Clinical-grade ECG and vital-sign monitoring from the comfort of your sofa.
3. Comfortable as your favourite shirt; no wires, gels or sticky patches.
4. Wear day and night; remove easily for showering.

5. One System, Three Vital Signs.

6. Detects arrhythmias (including AF), monitors blood-pressure trends and assesses sleep breathing patterns.
7. All in one smart garment with integrated electronics.

8. Prevention Becomes a Habit.

9. Longer monitoring windows catch episodes missed by 24-hour tests.
10. AI-powered alerts notify you and your doctor before symptoms appear.
11. Easy to repeat annually with reminders; periodic check-ins keep care continuous and proactive.
12. Your data is secure, accessible and shared only with authorised clinicians.

2.3 Pricing Section

Title: “Invest in Your Heart Health”

Insurance Coverage:

“With a physician’s referral, your screening is fully reimbursed by Swiss health insurance. We guide you through the eligibility process.”

Self-Pay Options:

Screening Duration	Price (CHF)	Value Proposition
3-Day Screening	149	Quick snapshot for baseline check
5-Day Screening	249	Balanced monitoring for deeper insight
10-Day Screening	349	Gold standard detection – catches more intermittent episodes

Value Message:

"Peace of mind for less than the cost of a coffee per day."

2.4 Our Medical Advisors

Title: "Trusted by Switzerland's Leading Cardiologists"

Present each advisor with their photo, title, affiliation and a brief endorsement. Use factual information from credible sources; quotes may be paraphrased based on their expertise.

- **Prof. Frank Ruschitzka** – Chairman, University Heart Center & Department of Cardiology, University Hospital Zurich ³. Former president of the Heart Failure Association of the ESC. *"Comfortable, extended monitoring at home empowers patients and clinicians alike."*
- **Prof. Matthias Wilhelm** – Associate Professor of Cardiology and Medical Director of Rehabilitation & Sports Medicine, Inselspital Bern ⁴. Pioneer in preventive cardiology and sports medicine. *"Wearable diagnostics make preventive screening accessible to my athletic and everyday patients."*
- **Dr. Michiel Winter** – Cardiologist, Amsterdam University Medical Centre; e-health and AI advocate ⁵. *"Home-based monitoring and data-driven care accelerate diagnosis and reduce costs."*
- **Dr. Mehdi Namdar** – Electrophysiologist, Division of Cardiology – Electrophysiology Unit, University Hospital Geneva ⁶. *"Extended wearable ECG enables earlier detection of arrhythmias that short tests miss."*

2.5 Audience-Specific Value Propositions

For Patients

Headline: "Your Heart Health, On Your Terms"

- No hospital visits or waiting rooms.
- Comfortable, breathable garment you can sleep and exercise in.
- Continue normal life; take it off briefly to shower.
- Receive results within days.
- Covered by Swiss health insurance with referral; affordable self-pay options available.

For General Practitioners (GPs)

Headline: "Expand Your Cardiac Care Toolkit"

- Simple 10-minute onboarding; no hardware investment required.
- Provide preventive screening for at-risk patients without in-office monitoring.
- Enhance patient satisfaction and strengthen referral relationships.
- Secure, GDPR-compliant portal with straightforward reporting.

For Cardiologists

Headline: “Hospital-Grade Data, Home-Based Comfort”

- High-resolution ECG and vital-sign data recorded over days instead of hours.
- Extended monitoring demonstrates superior detection rates compared with 24-hour Holters ⁷.
- High patient compliance observed in studies, thanks to the comfortable design ⁸.
- Integrate reports into existing EMR systems via HL7/FHIR; no equipment purchases.

For Telemedicine Companies

Headline: “Turn Virtual Care into Smart Care”

- Continuous patient data to support teleconsultations.
- API access for seamless integration into telehealth platforms.
- Enhance patient engagement and reduce liability with objective data.
- A single platform monitoring multiple vital signs.

For Corporate Wellness

Headline: “Screening Is Caring”

- Offer employees preventive heart screening as part of corporate wellness programmes.
- Demonstrate commitment to wellbeing and reduce absenteeism.
- Volume discounts and aggregated, anonymous reporting.
- Early detection can lower healthcare costs and improve productivity.

2.6 Technology & Workflow

2.6.1 Electrode & Garment Technology

Title: “The Science of Comfort”

- Patented **carbon-based dry electrodes** provide clinical-grade ECG signals without gels or adhesives.
- **Machine washable:** garments maintain signal quality after multiple washes thanks to graphene-coated textiles ⁹.
- **Skin-friendly & hypoallergenic:** soft, breathable fabrics prevent irritation.
- **Precise positioning:** smart textile keeps electrodes in place for consistent contact.
- **Textile computing through knitting:** Our garments are created using proprietary knitting techniques that weave conductive yarns and sensors directly into the fabric. This textile-computing approach, pioneered by Myant and enhanced by Nanoleq’s patented dry electrodes and stretchable conductive cables, makes the monitoring hardware essentially invisible ¹⁰. The result is a comfortable, washable garment that collects medical-grade signals without wires or patches.

2.6.2 Patient Journey

1. **Eligibility Check:** Complete a 2-minute online questionnaire to determine insurance coverage and suitability.

2. **Referral:** Schedule a teleconsultation or visit your GP for a prescription.
3. **Delivery:** Receive the SKIIN kit at your doorstep.
4. **Wear:** Slip on the garment; it fits like a shirt and can be worn discreetly under clothing.
5. **Live:** Go about your normal activities; remove briefly for showering.
6. **Return:** Repackage the kit in its original box, apply the prepaid return **label** included inside, and drop it at any SwissPost mailbox.
7. **Results:** Receive a secure, physician-interpreted report within 48 hours after the kit is returned.

2.6.3 Clinician Workflow

- **Secure Data Flow:** Device → Smartphone app → Encrypted cloud → **MVCP** (Medical Vital Cloud Portal) for clinicians, and ultimately to our Holter analysis platform.
- **Compliance:** MDR Class IIa certified; GDPR and Swiss data protection compliance; HL7/FHIR compatible.
- **MVCP (Administrative & Live Review Portal):** Healthcare providers use MVCP to set up Holter studies, manage patients and view real-time ECG traces and symptom-by-symptom strips during the monitoring period.
- **Holter Analysis Platform:** After monitoring is complete, data flows into a dedicated analysis platform (powered by Medical Algorithmics). AI pre-processing flags potential arrhythmias, and cardiac technicians together with cardiologists review the data to generate the final diagnostic report.
- **Reporting & Integration:** Final reports are produced by cardiac experts and delivered via MVCP. Reports integrate with electronic medical records; clinicians can download or import them using HL7/FHIR.
- **Support & Training:** Comprehensive onboarding and ongoing support for healthcare providers.

3 Clinical Evidence & References

All statistical statements and claims must be accompanied by citations in our marketing materials. Key research findings include:

- **Silent AF episodes:** Up to 70 % of atrial-fibrillation episodes can occur without symptoms ¹.
- **Stroke risk:** Atrial fibrillation contributes to 20–30 % of ischemic strokes ².
- **Extended monitoring:** Clinical studies have shown that long-term wearable ECG monitoring detects significantly more arrhythmias than 24-hour tests. In one trial, a 14-day patch identified paroxysmal arrhythmias in 66 % of patients versus only 9 % with a 24-hour Holter, and detection rates increased markedly over the monitoring period ⁷. High compliance was observed in a 14-day post-stroke monitoring cohort ⁸.
- **Electrode technology:** Graphene-coated textile electrodes are machine-washable and maintain signal quality comparable to conventional electrodes ⁹.

Additional references (e.g., PACE study results, Swiss pilot outcomes, internal validation studies) should be gathered before publication. Avoid quoting precise percentages (e.g., 95 % compliance, 98.6 % accuracy) unless verified.

4 Call-to-Action Strategy

Use multiple CTAs tailored to the user's stage in the journey. Ensure primary CTAs are visible above the fold and repeated strategically.

- **Primary CTAs:** "Start Your Free Assessment"; "Check Your Insurance Coverage"; "Take Control of Your Heart Health Today".
- **Secondary CTAs:** "Learn How It Works"; "Book a Consultation"; "See the Science"; "Read Success Stories".
- **Micro-CTAs:** "Questions? Chat with us"; "Prefer to call? 0800-SKIIN-CH"; "Email: care@skiin.ch".

5 Emotional Messaging & Storytelling

Incorporate genuine stories (once available) that illustrate the impact of early detection. Until real testimonials are gathered, use anonymised, representative vignettes:

- **Maria's Story:** Maria detected atrial fibrillation years before any symptoms appeared. Today she hikes the Matterhorn every summer.
- **Thomas & His Daughter:** Thomas's daughter encouraged him to try SKIIN. The extended screening captured an arrhythmia his annual check-up missed.
- **Marc's Commitment:** After his brother's stroke, Marc vowed to prioritise prevention. SKIIN gives him peace of mind and allows his family to breathe easier.

Craft caregiver-focused messages: "Because your family needs you healthy"; "Every heartbeat matters to someone who loves you".

6 Implementation & Success Metrics

1. **Phase 1:** Implement product renaming and pricing updates across all pages and components.
2. **Phase 2:** Restructure the homepage with new hero messaging, problem/solution narrative and CTA placements.
3. **Phase 3:** Add the medical advisors section and integrate verified biographies and quotes.
4. **Phase 4:** Update audience-specific value propositions and technology descriptions site-wide.
5. **Phase 5:** Infuse emotional messaging into relevant sections and testimonials once available.
6. **Phase 6:** Review translation files to ensure consistency across German, French, Italian and English versions.

Success Metrics:

- Increase homepage CTA clicks by 50 %.
- Improve eligibility-form completion rate by 30 %.
- Reduce bounce rate on solution pages by 25 %.
- Increase average time on site by 40 %.
- Increase overall conversion (from visitor to completed eligibility form) by 35 %.

Next Steps:

1. Approve this updated copy specification.
2. Collect or develop the additional clinical evidence and testimonials required to substantiate remaining claims.
3. Coordinate with design and development teams to implement the updated copy within the existing component architecture.
4. Conduct A/B testing on hero headlines, CTAs and story formats to optimise engagement.
